If you are in the market for just about anything, from a new coffeemaker to a new computer to a new car - The "Consumer Reports" Buying Guide 2008 is your one-stop portable reference source for making intelligent, money saving purchases for all home buying needs. Consumer Reports has done the homework for you by testing hundreds of brand-name products to come up with the Best Buys for 2008, along with the best buying advice on the market. If you have asked yourself -- "Is this the right product for me? Will I get my money's worth in this product? Which brand is the best for me?" -- let Consumer Reports expert buying advice and Ratings steer you in the right direction. "Consumer Reports" Buying Guide 2008 tells you what manufacturers "can't tell you - based on a full year's worth of Consumer Reports testing. This compact reference guide contains over 900 brand-name product ratings along with invaluable information on what products are available, important features, latest trends and expert

advice on: Home office equipment  
Digital cameras and camcorders  
Home entertainment  
Cellular Phones  
Home and yard products  
Gas grills  
Air conditioners  
Kitchen appliances  
Bath and Laundry products  
Vacuum cleaners and washing machines  
Cars, minivans, pickups and SUV's...And so much more! From refrigerators to home theater systems, mattresses to microwave ovens, "Consumer Reports Buying Guide 2008" will make you a smarter shopper, and will ultimately pay off in valuable product knowledge, time saved, and perhaps money saved too! "To explore this potential and its impact on policy, the Council on Foreign Relations sponsored a second Independent Task Force on Nonlethal Technologies. This business magazine covers domestic and international business topics. Special issues include Annual Report on American Industry, Forbes 500, Stock Bargains, and Special Report on Multinationals. The Electronics and Electrical Engineering

Laboratory (EEEL), working in concert with other NIST Laboratories, is providing measurement and other generic technology critical to the competitiveness of the U.S. electronics industry and the U.S. electricity-equipment industry. This report summarizes selected technical accomplishments and describes activities conducted by the Lab in FY 1998. Also included are profiles of EEEL's organization, customer interactions, and long-term goals. Appendix includes crosswalk of EEEL programs and projects; EEEL FY1998 resources; EEEL FY1998 CRADAS; and EEEL organization chart. Electromagnetic metamaterials-from fundamental physics to advanced engineering applications This book presents an original generalized transmission line approach associated with non-resonant structures that exhibit larger bandwidths, lower loss, and higher design flexibility. It is based on the novel concept of composite right/left-handed (CRLH) transmission line metamaterials (MMs),

which has led to the development of novel guided-wave, radiated-wave, and refracted-wave devices and structures. The authors introduced this powerful new concept and are therefore able to offer readers deep insight into the fundamental physics needed to fully grasp the technology. Moreover, they provide a host of practical engineering applications. The book begins with an introductory chapter that places resonant type and transmission line metamaterials in historical perspective. The next six chapters give readers a solid foundation in the fundamentals and practical applications: Fundamentals of LH MMs describes the fundamental physics and exotic properties of left-handed metamaterials TL Theory of MMs establishes the foundations of CRLH structures in three progressive steps: ideal transmission line, LC network, and real distributed structure Two-Dimensional MMs develops both a transmission matrix method and a transmission line method to address the problem of finite-size

2D metamaterials excited by arbitrary sources  
Guided-Wave Applications and Radiated-Wave  
Applications present a number of  
groundbreaking applications developed by the  
authors The Future of MMs sets forth an expert  
view on future challenges and prospects This  
engineering approach to metamaterials paves  
the way for a new generation of microwave and  
photonic devices and structures. It is  
recommended for electrical engineers, as well as  
physicists and optical engineers, with an interest  
in practical negative refractive index structures  
and materials. "Integrates principles of  
electromagnetics, dielectrics, heat and moisture  
transfer, packaging, solid mechanics, fluid flow,  
food chemistry, and microbiology to provide a  
comprehensive overview of microwave  
processing in a single accessible source." Lists  
citations with abstracts for aerospace related  
reports obtained from world wide sources and  
announces documents that have recently been  
entered into the NASA Scientific and Technical

Information Database. The Congressional  
Record is the official record of the proceedings  
and debates of the United States Congress. It is  
published daily when Congress is in session. The  
Congressional Record began publication in  
1873. Debates for sessions prior to 1873 are  
recorded in The Debates and Proceedings in the  
Congress of the United States (1789-1824), the  
Register of Debates in Congress (1824-1837),  
and the Congressional Globe (1833-1873)  
Divided into three main parts, the book guides  
the reader to an understanding of the basic  
concepts in this fascinating field of research.  
Part 1 introduces you to the fundamental  
concepts of simulation. It examines one-  
dimensional electrostatic codes and  
electromagnetic codes, and describes the  
numerical methods and analysis. Part 2 explores  
the mathematics and physics behind the  
algorithms used in Part 1. In Part 3, the authors  
address some of the more complicated  
simulations in two and three dimensions. The

book introduces projects to encourage practical work Readers can download plasma modeling and simulation software — the ES1 program — with implementations for PCs and Unix systems along with the original FORTRAN source code. p-BodyText2Now available in paperback, Plasma Physics via Computer Simulation is an ideal complement to plasma physics courses and for self-study. Using the strategic framework familiar to marketers, information is organized and presented as it may apply to specific stages in the strategic marketing process: key issues are raised and information is presented to address them. This volume is intended for the busy marketer who needs access to "state-of-the art" knowledge and its implications for marketing strategy development.
