[Tuning the Antipodes: Battles for performing pitch in Melbourne](#) May 12 2022 Examining the many controversies associated with pitch standards in Melbourne over more than a hundred years, Simon Purtell discovers their impact on the tuning of the city's orchestras and organs, as well as its defence, municipal and Salvation Army bands. This fascinating history involves famous local and touring singers, conductors and organists, including Nellie Melba, Malcolm Sargent and William McKie, revealing just how complex a problem it was to ensure that Melbourne's music-makers remained in tune. "Harry Potter and the Cursed Child has nothing on the saga of 'Pitch, pitch, that cursed pitch': the seemingly endless and frequently caustic attempts to establish a uniform performing pitch for music in the Antipodes. It is a typically Melburnian drama of mixed deference to Britain and stubborn upholding of local interests that the author so eloquently and patiently chronicles, and it ranges from the almost theocratic intervention of Dame Nellie Melba at the beginning of the twentieth century to the Stanthorpe Apple and Grape Harvest Festival of 1972. At the same time, it will have been a battle taking place comparably in all the major cities of the British Empire and beyond, though each with its peculiar twists and turns. What Simon Purtell has done is show us, in immaculate detail, just how pervasive and intricate, not to mention costly, this tectonic realignment of a fundamental element of musical infrastructure must have been in all places over a very long period of time" (Emeritus Professor Stephen Banfield, Centre for the History of Music in Britain, the Empire and the Commonwealth, University of Bristol).

[Academic Language Mastery: Grammar and Syntax in Context](#) Mar 30 2021 By now it's a given: if we're to help our ELLs and SELs access the rigorous demands of today's content standards, we must cultivate the "code" that drives school success: academic language. Look no further for assistance than this much-anticipated series from Ivannia Soto, in which she invites field authorities Jeff Zwiers, David and Yvonne Freeman, Margarita Calderon, and Noma LeMoine to share every teacher's need-to-know strategies on the four essential components of academic language. The subject of this volume is grammar and syntax. Here, David and Yvonne Freeman shatter the myth that academic language is all about vocabulary, revealing how grammar and syntax inform our students' grasp of challenging text. With this book as your roadmap, you'll learn how to: Teach grammar in the context of students' speech and writing Use strategies such as sentence frames, passives, combining simple sentences into more complex sentences, and nominalization to create more complex noun phrases Assess academic language development through a four-step process Look inside and discover the tools you need to help students master more sophisticated and complex grammatical and syntactical structures right away. Better yet, read all four volumes in the series and put in place a start-to-finish instructional plan for closing the achievement gap.

[The Neural Basis of Echolocation in Bats](#) Jan 28 2021 The brain of an echo locating bat is devoted, in large part, to analyzing sound and conducting behavior in a world of sounds and echoes. This monograph is about analysis of sound in the brainstem of echolocating bats and concerns the relationship between brain structure and brain function. Echolocating bats are unique subjects for the study of such relationships. Like man, echolocating bats emit sounds just for the purpose of listening to them. Simply by observing the bat's echolocation sounds, we know what the bat listens to in nature. We therefore have a good idea what the bat's auditory brain is designed to do. But this alone does not make the bat unique. The brain of the bat is, by mammalian standards, rather primitive. The unique aspect is the combination of primitive characteristics and complex auditory processing. Within this small brain the auditory structures are hypertrophied and have an elegance of organization not seen in other mammals. It is as if the auditory pathways had evolved while the rest of the brain remained evolutionary quiescent.

[Tuning In The Great Gildersleeve](#) Jun 13 2022 When Throckmorton P. Gildersleeve bade farewell to Fibber McGee and Molly and left Wistful Vista on a train in 1941, no one could have predicted that he would be riding the airwaves with his own new show until 1957. But when one listens to episodes of radio's first spinoff, it becomes clear the The Great Gildersleeve succeeded because its likable and amusing characters were appealingly fallible, much like the folks each of us knew in our hometowns. This book is a guide to more than 500 episodes of The Great Gildersleeve that are in circulation and also to the scripts of 46 episodes for which no recordings exist. Background on the development of the program is included, and the appendices include a list

of episodes as well as information about cast members, notable occurrences on the program, ratings, and the films and TV series.

[Tuning the World](#) Aug 15 2022 Tuning the World tells the unknown story of how the musical pitch A 440 became the global norm. Now commonly accepted as the point of reference for musicians in the Western world, A 440 hertz only became the standard pitch during an international conference held in 1939. The adoption of this norm was the result of decades of negotiations between countries, involving a diverse group of performers, composers, diplomats, physicists, and sound engineers. Although there is widespread awareness of the variability of musical pitches over time, as attested by the use of lower frequencies to perform early music repertoires, no study has fully explained the invention of our current concert pitch. In this book, Fanny Gribenski draws on a rich variety of previously unexplored archival sources and a unique combination of musicological perspectives, transnational history, and science studies to tell the unknown story of how A 440 became the global norm. Tuning the World demonstrates the aesthetic, scientific, industrial, and political contingencies underlying the construction of one of the most "natural" objects of contemporary musical performance and shows how this century-old effort was ultimately determined by the influence of a few powerful nations.

[Tuning the Student Mind](#) Jul 14 2022 Explores the effectiveness and value of meditation in a college classroom. How can we rethink teaching practices to include and engage the whole student? What would student experience look like if we integrated silence and feeling with empirical analysis? Tuning the Student Mind is the story of one teacher's attempt to answer these questions by creating an innovative college course that marries the spiritual and the theoretical, integrating meditation and self-reflection with more conventional academic curriculum. The book follows Molly Beauregard and her students on their intellectual and spiritual journey over the course of a semester in her class. "Consciousness, Creativity, and Identity." Interweaving personal stories, student writing, and Beauregard's responses, along with recommendations for further reading and a research appendix, it makes the case for the transformative power of consciousness-centered education. Written in a warm, engaging voice that reflects Beauregard's teaching style, Tuning the Student Mind provides an accessible, step-by-step template for other educators, while inviting readers more broadly to reconnect with the joy of learning in and beyond the classroom. [Tuning the Mind](#) Apr 11 2022 Starting from the late Renaissance, efforts to make vocal music more expressive heightened the power of words, which, in turn, gave birth to the modern semantics of musical expression. As the skepticism of seventeenth-century science divorced the acoustic properties from the metaphysical qualities of music, the door was opened to discern the rich links between musical perception and varied mental faculties. In Tuning the Mind, Ruth Katz and Ruth HaCohen trace how eighteenth century theoreticians of music examined anew the role of the arts within a general theory of knowledge. As the authors note, the differences between the physical and emotional dimensions of music stimulated novel conceptions and empirical inquiries into the old aesthetic queries. Tracing this development, their opening chapter deals with seventeenth-century epistemological issues concerning the artistic qualities of music. Katz and HaCohen show that painting and literature displayed a comparable tendency toward "musicalization," whereby the dynamic of forms-the modalities specific to each artistic medium-rather than subject matter was believed to determine expression. Katz and HaCohen explore the ambiguities inherent in idealization of an art form whose mimetic function has always been problematic. They discuss the major outlines of this development, from Descartes to Vico through Condillac. Particular emphasis is placed on eighteenth-century British thinkers, from Shaftesbury to Adam Smith, who perceived these problems in their full complexity. They also explore how the French and the Germans dealt differently with questions that preoccupied the British, each nation in accordance with their own past tradition and tendencies. The concluding chapter summarizes the parallel development of abstract art and basic hypotheses concerning the mind and explores basic theoretical questions pertaining to the relationship between perception and cognition. In addressing some of the most complex problems in musical aesthetics, Katz and HaCohen provide a unique historical perspective on the ways their art creates and develops coherent worlds, and, in so doing, contribute to our understanding of the workings of the mind.

[POWER7 and POWER7+ Optimization and Tuning Guide](#) Dec 19 2022 This IBM® Redbooks® publication provides advice and technical information about optimizing and tuning application code to run on systems that are based on the IBM POWER7® and POWER7+™ processors. This optimization work can: Improve the performance of the application that is being optimized for the POWER7 system Carry over improvements to systems that are based on related processor chips Improve performance on other platforms The audience of this book is those personnel who are responsible for performing migration and implementation activities on IBM POWER7-based servers, which includes system administrators, system architects, network administrators, information architects, and database administrators (DBAs).

[Microtonality and the Tuning Systems of Erv Wilson](#) Feb 26 2021 This book explores the emerging area of microtonality through an examination of the tuning theories of Erv Wilson. It is the first publication to offer a broad discussion of this influential theorist whose innovations have far-reaching ramifications for microtonal tuning systems. This study addresses the breadth and complexity of Wilson's work by focusing on his microtonal keyboard designs as a means to investigate his tuning concepts and their practical applications. Narushima examines materials ranging from historical and experimental tunings to instrument design, as well as musical applications of mathematical theories and multidimensional geometry. The volume provides an analysis of some of Wilson's most significant theoretical ideas, including the Scale Tree, Moments of Symmetry, Constant Structures, and Combination-Product Sets. These theories offer ways to conceptualize musical scales as patterns with structural integrity and whose shapes can be altered to produce infinitely varying forms. The book shows how these structural properties can be used to map scales onto a microtonal keyboard by providing step-by-step guidelines and clearly illustrated examples. Most importantly, it brings together theoretical and practical methods of tuning to enable composers, performers, and instrument designers to explore previously uncharted areas of microtonality, making a significant contribution to the fields of music theory, composition and music technology.

[Tuning In](#) Sep 16 2022 In a quest for spiritual discovery and greater meaning in his life, journalist and filmmaker David Thomas stumbled upon channeling, a practice dating back to antiquity wherein an individual, usually in a trance state, makes a psychic connection with a spirit being. He was so taken with his first encounter that he arranged for in-depth interviews with six of the most prominent trance channelers practicing today and made a documentary about them, the critically acclaimed film Tuning In. In the book Tuning In, Thomas takes us behind the scenes as he and his cameraman Matthew Klinck travel across the country, sharing their adventures and experiences meeting and interviewing these six remarkable men and women. We not only get to know both the filmmakers and the channelers as people but also to watch as Thomas transforms from skeptical journalist to true believer. Written in an engaging and accessible style, Tuning In shows how this channeled material answers many of life's most

basic yet elusive questions in profound ways: Why are we here? And, how can we create fulfilling lives for ourselves? This is a book about real people, real lives, with real advice for us all. Tuning In features Lee Carroll (Kryon), Darryl Anka (Bashar), Geoffrey Hoppe (Tobias), Wendy Kennedy (a Pleidian Collective), John Cali (Chief Joseph), and Shawn Randall (Torah).
