Shine a light into the unknown There are still dark corners of our planet that are yet to be explored. In this remarkable book, Steve Backshall offers an unflinching account of his adventures into these uncharted territories around the globe, in search of world firsts. Each location brings its own epic challenges - whether it's the first climb of an arctic ice fall in Greenland, the first recorded navigation of a South American river, or the first exploration of the world's longest cave system in Mexico. But all of them represent new tests of the limits of human endeavour. Accompanying a

major 10-part series on BBC and Dave, Expedition is a breathtaking journey into the unknown, and a brilliantly written celebration of the pleasures of genuine discovery. This comprehensive guide to Steampunk creations of all kinds offers inspiration and practical tips for bringing your own retro-futuristic visions to life. Whether you're a newbie to the world of Steampunk, or a long-time enthusiast of airships, goggles, and mad scientists, The Steampunk User's Manual is essential reading. The popular subgenre of science fiction has grown into a cultural movement; one that invites fans to let their imaginations go wild. In this volume, Jeff VanderMeer—the renowned expert in all things Steampunk—presents a practical and inspirational guidance for finding your own path into this realm. Including sections on art, fashion, architecture, crafts, music, performance, and storytelling, The Steampunk User's Manual provides a conceptual how-to guide on everything from the utterly doable to the completely over-the-top. First published in 1855, this is an account of a British government-financed expedition to further European commercial interests in West Africa. It details the surveying of sites for future missions which has a profound effect on the history of Southern Nigeria. Includes the Proceedings of the Royal geographical society, formerly pub. separately.

Presents results of sea voyages and ocean expeditions performed by Russian seamen from the late 17th century to the present; includes coverage of the most famous expeditions, national and international projects involving Russia, and organizations contributing to research of the world oceans. Appropriate for international oceanographic scientific communities as well as anyone interested in historical Russian marine explorations and the current state of expeditionary research. Inclusion of general information about Russia's marine expeditionary research renders the work particularly useful for students and officers in navigation schools. Philip Fennell and Marie King, both descendants of a pardoned Fenian prisoner, tell the story from John Devoy's own records and from the ship's logbooks. John Devoy's Catalpa Expedition includes an introduction by Terry Golway and the personal diaries, letters, and reports from John Devoy and his men"--Jacket. Russia first encountered Alaska in 1741 as part of the most ambitious and expensive expedition of the entire 18th century. During the next 126 years the struggle to develop and refine geographic knowledge of the vast region comprising northeastern Asia, the North Pacific, and Alaska met with many obstacles, including inclement weather, the chain of supply over great distances, the need to train expert

navigators and cartographers, and false leads due to spurious voyage accounts. For much of this era, critical geographic knowledge was kept as a state secret in Russia and not shared, even with the very navigators and cartographers who were developing much needed maps and navigational aids. Despite this, a rich cartographic heritage developed to be carried forward into the American era. The traditional Russian cartographic methods were applied to new discoveries in Siberia and beyond. Early fur traders and explorers utilized this system which for a time co-existed with the new cartographic methodology utilized in Europe and adopted for use by the Russia of Peter the Great. It became an age of scientific exploration. Great Britain, France, Spain, but especially Russia, sent expeditions. An increasingly complete knowledge of the coasts of North America, with forays into the interior, emerged. Postnikov describes the explorations and richly illustrates how the resulting maps evolved and contributed to the world's knowledge of one of the last great regions of the world to be explored. "Speaking About Science : A Manual for Creating Clear Presentations is essential reading for anyone who presents data at meetings and conferences. Based on the curriculum that authors have developed for their public speaking courses, the book provides the practical tools all speakers

need to create clear and compelling presentations for any audience."--BOOK JACKET. The most complete book of its kind, this comprehensive text describes 607 species & 2,150 varieties & cultivars, with the help of plentiful drawings & photos. Conifers: The Illustrated Encyclopedia (page 12) was created as a pictorial companion to this manual. An advanced reference documenting, in detail, every step of a real System-in-Package (SiP) design flow Written by an engineer at the leading edge of SiP design and implementation, this book demonstrates how to design SiPs using Mentor EE Flow. Key topics covered include wire bonding, die stacks, cavity, flip chip and RDL (redistribution layer), Embedded Passive, RF design, concurrent design, Xtreme design, 3D real-time DRC (design rule checking), and SiP manufacture. Extensively illustrated throughout, System in Package Design and Simulation covers an array of issues of vital concern for SiP design and fabrication electronics engineers, as well as SiP users, including: Cavity and sanded dies design FlipChip and RDL design Routing and coppering 3D Real-Time DRC check SiP simulation technology Mentor SiP Design and Simulation Platform Designed to function equally well as a reference, tutorial, and self-study, System in Package Design and Simulation is an indispensable working resource for every SiP

designer, especially those who use Mentor design tools. Background; UML concepts; Reference; Appendices. The book is based on results from the Russian expedition in the region of the Antarctic Peninsula and Powell Basin in the northern part of the Weddell Sea, as well as on the review of earlier research in the region. The main goal of the research was to collect the newest data and study the physical properties and ecology of this key region of the Southern Ocean. Data analysis is supplemented with numerical modeling of the atmosphere-ocean interaction and circulation in the adjacent region, including research on rogue waves. The focus of the study was the Antarctic Circumpolar Current, currents and water properties in the Bransfield Strait and Antarctic Sound, properties of seawater, currents, ecosystem and biological communities in the Powell Basin of the northwestern Weddell Sea, and their variations. An attempt is made to reveal the role of various components of the Antarctic environment in the formation of biological productivity and maintenance of the Antarctic krill population. This is especially important as in the last decades the Antarctic environment has experienced significant changes related to the global climatic trends. This laboratory manual covers the study of chromosomes in plants, animal and human systems, dealing with the protocols and

principles involved. It caters to the requirements of scientists working laboratories, presenting details of the operational mechanism for use at the chromosome level. This manual provides comprehensive and practical knowledge about procedures, protocols and techniques used to conduct Sasquatch field research. Sasquatch leaves activity signs behind while wandering through the PNW. Either by accident or on purpose, this manual will explain how to recognize these activity signs. The Sasquatch Research Manual describes research methods to arrive at the common sense decisions based on practical research procedures. This easy to read how to guide will not guaranty Sasquatch sighting, but it will make it easier and safer for you to get out there and know what you are doing. The story of hugely ambitious and risky long-distance private voyages, only one of which brought huge returns for investors. A manual for elementary school teachers covering the wide variety of behavioral and cognitive issues that may arise in their classrooms. Gives definitions and descriptions of possible underlying problems or disorders that may prompt inappropriate behavior or disrupt a child's learning, and appropriate intervention points.
