Physics for Scientists and Engineers combines outstanding pedagogy with a clear and direct narrative and applications that draw the reader into the physics. The new edition features an unrivaled suite of media and on-line resources that enhance the understanding of physics. Many new topics have been incorporated such as: the Otto cycle, lens combinations, three-phase alternating current, and many more. New developments and discoveries in physics have been added including the Hubble space telescope, age and inflation of the universe, and distant planets. Modern physics topics are often discussed within the framework of classical physics where appropriate. For scientists and engineers who are interested in learning physics. Riding on the success of 3D cinema blockbusters and advances in stereoscopic display technology, 3D video applications have gathered momentum in recent years. 3D-TV System with Depth-Image-Based Rendering: Architectures, Techniques and Challenges surveys depth-image-based 3D-TV systems, which are expected to be put into applications in the near future. Depth-image-based rendering (DIBR) significantly enhances the 3D visual experience compared to stereoscopic systems currently in use. DIBR techniques make it possible to generate additional viewpoints using 3D warping techniques to adjust the perceived depth of stereoscopic videos and provide for auto-stereoscopic displays that do not require glasses for viewing the 3D image. The material includes a technical review and literature survey of components and complete systems, solutions for technical issues, and implementation of prototypes. The book is organized into four sections: System Overview, Content Generation, Data Compression and Transmission, and 3D Visualization and Quality Assessment. This book will benefit researchers, developers, engineers, and innovators, as well as advanced undergraduate and graduate students working in relevant areas. The first textbook of its kind dealing with composite tissue allograft and allograft transplantation, provides an excellent overview on the subject. It provides a clear description of the current status of the transplant of every composite tissue allograft already performed and others which are still at the basic experimental level. The editors of the book, who also contribute chapters in their expertise, are world renowned surgeons. This book opens with an introductory

chapter on the history of this type of transplantation and then details the clinical experience in each graft such as hand, larynx, face, uterus and the related histopathology, immunosuppression and immunomodulation. A multidisciplinary and comprehensive presentation of the various aspects of this new area of transplantation will allow the reader to understand the complexity and the challenges of composite tissue transplantation. A number of important topics are analyzed and discussed in detail, such as the ethical, medicolegal, psychological and immunological implications. New rehabilitation techniques and strategies, together with innovative tools for the functional evaluation of the transplanted parts, are highlighted. A section on the experimental work underlines what lies ahead of us.

This handbook explains principles, processes, methods, and procedures of optical engineering in a concise and practical way. It emphasizes fundamental approaches and provides useful formulas and step-by-step worked-out examples to demonstrate applications and clarify calculation methods. The book covers refractive, reflective, and diffractive optical components; lens optical devices; modern fringe pattern analysis; optical metrology; Fourier optics and optical image processing; electro-optical and acousto-optical devices; spatial and spectral filters; optical fibers and accessories; optical fabrication; and more. It includes over 2,000 tables, flow charts, graphs, schematics, drawings, photographs, and mathematical expressions. This book presents the proceedings of the first vehicle engineering and vehicle industry conference. It captures the outcome of theoretical and practical studies as well as the future development trends in a wide field of automotive research. The themes of the conference include design, manufacturing, economic and educational topics.

Na het wereldwijde succes van de bestsellers *Stalingrad* en *Berlijn* schrijft historicus en meesterverteller Antony Beevor opnieuw een standaardwerk over een van de grote keerpunten uit de Tweede Wereldoorlog: D-day en de landing in Normandië. 'Nooit eerder in de oorlogsgeschiedenis,' schreef Stalin aan Churchill, 'heeft zo'n onderneming plaatsgevonden.' Het was inderdaad verreweg de grootste vlootinvasie ooit vertoond. De deelnemers aan de invasie over Het Kanaal soldaten, zeelieden, piloten zullen het beeld nooit vergeten, net zomin als de verraste Duitse verdedigers aan de Normandische kust. De schaal van de onderneming en de nauwgezette planning waren zonder precedent, maar hoewel de bruggenhoofden relatief snel waren aangelegd, was de volgende fase van de strijd veel moeilijker dan verwacht. Het Normandische heggelandschap was ideaal voor de verdediging, en de Duitsers, in het bijzonder de divisies van de Waffen-SS, vochten meedogenloos voor hun laatste kans. Aan de hand van nooit eerder gebruikt materiaal uit meer dan dertig archieven in zes landen, laat Antony Beevor zien hoe de Britse, Canadese en Amerikaanse troepen verzeild raakten in gevechten waarvan de heftigheid die van het Oostfront evenaarde.

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in Scientific and technical aerospace reports (STAR) and International aerospace abstracts (IAA). Publishes papers reporting on research and development in optical science and engineering and the practical applications of known optical science, engineering, and technology. *Lasers and Optical Instrumentation* covers B.E., M.E., and M. Sc. (Electronics) degree courses. The text covers basic principles of lasers, types of lasers and their characteristics, laser applications in engineering and medicine. Further the book includes extensive coverage of optoelectronic devices, fibre optic communication and fibre optic sensors. The book includes many solved problems throughout the text to support the theoretical concepts and help in understanding of underlying principles. Review questions have been included at the end of each chapter to practise and self-study. Spread in Ten Chapters the book broadly covers: "

Characteristics of lasers, mode locking, Q-switching, powerful lasers, frequency stabilisation "

Overview of applications of lasers in science, engineering and medicine; reliability and safety aspects " Laser interferometer, laser strain gauges, laser Doppler velocimeter, laser ranging, mechanical cutting, welding, scribing, holography " Applications of Raman spectroscopy " Application of laser devices, optical fibers etc., in fiber optic communications " Integrated optics, radiation source, transmission link, detector " Fibre optical sensors, non-intrusively, displacements, pressure, temperature, high currents, angular velocity " Future perspectives nanophotonics, quantum dots, photonic crystals 'Ik was stomverbaasd dat ik nog nooit van dit boek had gehoord. Voor mij is het even belangrijk als het dagboek van Anne Frank.' - Steve McQueen Solomon Northup, in 1808 als vrij man geboren in New York, wordt in 1841 ontvoerd en in het Zuiden verkocht als slaaf. Twaalf jaar lang werkt hij op plantages in Louisiana, vaak onder de meest wrede omstandigheden, altijd in de hoop zijn vrijheid terug te winnen. In 1853 komt Northup eindelijk vrij. In datzelfde jaar verschijnt 12 jaar slaaf, zijn eigen aangrijpende relaas van zijn gevangenschap in een van de donkerste periodes uit de Amerikaanse geschiedenis. Het boek slaat direct in als een bom en opent vele Amerikanen de ogen voor de onmenselijkheid van het slavernijstelsel. 12 Years a Slave is verfilmd door de Britse filmmaker Steve McQueen en werd geproduceerd door onder anderen Brad Pitt. De film won de Golden Globe voor Beste Film en is genomineerd voor negen Oscars, waaronder die voor Beste Film. Het boek verschijnt voor het eerst in Nederlandse vertaling. Met een voorwoord van Steve McQueen en een inleiding van Bianca Stigter
