The American Community Survey (ACS) is a major new initiative from the U.S. Census Bureau designed to provide continuously updated information on the numbers and characteristics of the nation's people and housing. It replaces the "long form" of the decennial census. Using the American Community Survey covers the basics of how the ACS design and operations differ from the long-form sample; using the ACS for such applications as formula allocation of federal and state funds, transportation planning, and public information; and challenges in working with ACS estimates that cover periods of 12, 36, or 60 months depending on the population size of an area. This book also recommends priority areas for continued research and development by the U.S. Census Bureau to guide the evolution of the ACS, and provides detailed, comprehensive analysis and guidance for users in federal, state, and local government agencies, academia, and media. Features strategic, what-if scenarios to challenge you. Annually, the government commits significant expenditure to a type of public contracts which are known as Public-Private Partnerships (PPPs) or the Private Finance Initiative (PFI). These contracts bind the public purse for decades in sectors such as Health, Defence and Detention, and involve the assignment of a significant role to the private sector in the provision of public services. This book explores the controversial subject of the public accountability of these contracts, and the corresponding large sums of public money involved. It explains how public accountability works for PPPs and the PFI, and it argues that it should be provided as part of the Economic Constitution. Drawing comparative understandings from the UK and the USA constitutional legal traditions, the book investigates public accountability from the perspective of the Economic Constitution, focusing on three accountability criteria - legal, accounting and administrative. In doing so, it provides an analysis which informs both from the perspective of academic research and from that of legal and consulting practice. The National School Lunch and School Breakfast Programs, administered by the Food and Nutrition Service (FNS) of the U.S. Department of Agriculture (USDA), are key components of the nation's food security safety net, providing free or low-cost meals to millions of schoolchildren each day. To qualify their children each year for free or reduced-price meals, many families must submit applications that school officials distribute and review. To reduce this burden on families and schools and to encourage more children to partake of nutritious meals, USDA regulations allow school districts to operate their meals programs under special provisions that eliminate the application process and other administrative procedures in exchange for providing free meals to all students enrolled in one or more school in a district. FNS asked the National Academies' Committee on National Statistics and Food and Nutrition Board to convene a panel of experts to investigate the technical and operational feasibility of using data from the continuous American Community Survey (ACS) to estimate students eligible for free and reduced-price meals for schools and school districts. The ACS eligibility estimates would be used to develop "claiming percentages" that, if sufficiently accurate, would

determine the USDA reimbursements to districts for schools that provided free meals to all students under a new special provision that eliminated the ongoing base-year requirements of current provisions. Using American Community Survey Data to Expand Access to the School Meals Program was conducted in two phases. It first issued an interim report (National Research Council, 2010), describing its planned approach for assessing the utility of ACS-based estimates for a special provision to expand access to free school meals. This report is the final phase which presents the panel's findings and recommendations. "Census microdata are the confidential records of specific individuals and housing units from whom Decennial Census or American Community Survey responses have been obtained. The U.S. Census Bureau also draws a sample from the full set of microdata and makes these sampled records available in the Public Use Microdata Sample (PUMS) data products, so that users can develop their own tabulations. These data are being used by state departments of transportation (DOTs) and metropolitan planning organizations (MPOs) for studies, such as analyses of the commuting characteristics of population subgroups, and for supporting travel demand model and land use models."--Preface It is more important than ever to share best practices with emerging leaders in the social services and education fields, as leaders and students need to understand the practical application of policies and theories. This book will address the recurring theme of leadership development, collaboration with communities and the importance of diverse teams to bring about systemic change and large scale reforms. Leadership Reflections can be used as a guide to provide important insights and tools that can be used by a diverse group of leaders and students in the social services and education fields. Recent events in this country are exposing more people to the disparities and inequities that exist for black and brown people. These disparities have to be addressed with a variety of different strategies. This book addresses one such area; the urgent need to reduce these disparities and dismantle the systemic obstacles that continue to stand in the way of families, children and communities thriving. A legal analyst for NPR, NBC, and CNN, delves into the facts surrounding what has been called the "worst intelligence disaster in U.S. history": the case of Robert Hanssen—a Russian spy who was embedded in the FBI for two decades. As a federal prosecutor and the daughter of an FBI agent, Wiehl has an inside perspective. She brings her experience and the ingrained lessons of her upbringing to bear on her remarkable exploration of the case, interviewing numerous FBI and CIA agents both past and present as well as the individuals closest to Hanssen. She speaks with his brother-in-law, his oldest and best friend, and even his psychiatrist. In all her conversations, Wiehl is trying to figure out how he did it—and at what cost. But she also pursues questions urgently relevant to our national security today. Could there be another spy in the system? Could the presence of a spy be an even greater threat now than ever before, with the greater prominence cyber security has taken in recent years? Wiehl explores the mechanisms and politics of our national security apparatus and how they make us vulnerable to precisely this kind of threat. Wiehl grew up among the same people with whom Hanssen ingratiated himself, and she has spent her career trying to find the truth within fractious legal and political conflicts. A Spy in Plain Sight reflects on the deeply sown divisions and paranoias of our present day and provides an unparalleled view into the functioning of the FBI, and will stand alongside pillars of the genre like Killers of the Flower Moon, The Spy and the Traitor, and No Place to Hide. The transformation towards EPCglobal networks requires technical equipment for capturing event data and IT systems to store and exchange them with supply chain participants. For the very first time, supply chain participants thus need to face the automatic exchange of event data with business partners. Data protection of sensitive business secrets is therefore the major aspect that needs to be clarified before companies will start to adopt EPCglobal networks. This book contributes to this proposition as follows: it defines the design of transparent real-time security extensions for EPCglobal networks based on in-memory technology. For that, it defines authentication protocols for devices with low computational resources, such as passive RFID tags, and evaluates their applicability. Furthermore, it outlines all steps for implementing history-based access control for EPCglobal software components, which enables a continuous control of access based on the real-time analysis of the complete query history and a fine-grained filtering of event data. The applicability of these innovative data protection mechanisms is underlined by their exemplary integration in the FOSSTRAK architecture. In June 2012, the Committee on National Statistics (sponsored by the U.S. Census Bureau) convened a Workshop on the Benefits (and Burdens) of the American Community Survey (ACS)-the detailed demographic and economic survey that began full-scale data collection in 2005 and that replaced the traditional "long form" in the 2010 census. ACS data are used by numerous federal agencies to administer programs, yet the ACS only moved from abstraction to reality for most users in 2010, when the first ACS estimates for small areas (based on 5 years of collected data) were made available. Hence, the workshop marked the opportunity to develop a picture of the breadth of the nonfederal user base of the ACS-among them, the media, policy research and evaluation groups (that distill ACS results for the media and broader public), state and local agencies, businesses and economic development organizations, and local and regional planning authorities-and to gather information on users' experiences with the first full releases of ACS products. In addition to covering innovative uses of the information now available on a continuous basis in the ACS, the workshop gave expression to the challenges and burdens associated with the survey: the time burden places on respondents, the challenges of explaining and interpreting estimates with increased levels of variability, and the privacy and confidentiality implications of some of the ACS content. Benefits, Burdens, and Prospects of the American Community Survey: Summary of a Workshop provides a factual summary of the workshop proceedings and hints at the contours of the ACS user constituency, providing important input to the ongoing review and refinement of the ACS program. News, Inc., Portland, OR (booknews.com). The International Symposium on Distributed Computing and Artificial Intelligence is an annual forum that brings together ideas, projects, lessons, etc. associated with distributed computing, artificial intelligence and its applications in different themes. This meeting has been held at the University of Salamanca from the 22th to the 24th of October 2008. This symposium has been organized by the Biomedicine, Intelligent System and Educational Technology Research Group (<http://bisite.usal.es/>) of the University of Salamanca. The technology transfer in this field is still a challenge and for that reason this type of contributions has been specially considered in this edition. This conference is the forum in which to present application of innovative techniques to complex problems. The artificial intelligence is changing our society. Its application in distributed environments, such as the Internet, electronic commerce, mobile communications, wireless devices, distributed computing, and so on is increasing and is becoming an element of high added value and economic potential, both industrial and research. These technologies are changing constantly as a result of the large research and technical effort being undertaken in both universities and businesses. The exchange of ideas between scientists and technicians from both academic and business areas is essential to facilitate the development of systems that meet the demands of today's society. This volume is a collection of fresh and novel contributions to regional science. They commemorate the scientific inheritance of the founding father of regional science, the late Walter Isard. All papers are written by well-known scholars in the field and serve to highlight the great importance of regional science theory and methodology for a better understanding of current spatial and environmental problems throughout our planet. The book showcases a multidisciplinary panorama of modern regional science research and presents new insights by applying regional science approaches. Thoroughly revised and updated for its Second Edition, this comprehensive, practical reference is an essential resource for obstetrician-gynecologists who are increasingly responsible for primary care and need information on the diagnosis and management of non-gynecologic disorders. It offers all primary care practitioners invaluable guidance on the wide variety of problems unique to women. The book includes chapters on age-specific issues to care for female patients at each stage of life and disease-oriented chapters covering all disorders seen by primary care physicians. Disease-oriented chapters include etiology, differential diagnosis, history, physical examination, laboratory and imaging studies, treatment, and special considerations during pregnancy. What will it be like to admit Artificial Companions into our society? How will they change our relations with each other? How important will

they be in the emotional and practical lives of their owners since we know that people became emotionally dependent even on simple devices like the Tamagotchi? How much social life might they have in contacting each other? The contributors to this book discuss the possibility and desirability of some form of long-term computer Companions now being a certainty in the coming years. It is a good moment to consider, from a set of wide interdisciplinary perspectives, both how we shall construct them technically as well as their personal philosophical and social consequences. By Companions we mean conversationalists or confidants not robots but rather computer software agents whose function will be to get to know their owners over a long period. Those may well be elderly or lonely, and the contributions in the book focus not only on assistance via the internet (contacts, travel, doctors etc.) but also on providing company and Companionship, by offering aspects of real personalization." Master the essential medical-surgical nursing content you'll need for success on the Next Generation NCLEX® Exam (NGN) and safe clinical practice! Unparalleled emphasis on clinical reasoning and clinical judgment helps you develop these vital skills when applying concepts to clinical situations. Emphasis on QSEN and patient safety focuses on safety and evidence-based practice with Nursing Safety Priority boxes, including Drug Alert, Critical Rescue, and Action Alert boxes. Direct, easy-to-read writing style features concise sentences and straightforward vocabulary. Emphasis on health promotion and community-based care reflects the reality that most adult health care takes place in environments outside of high-acuity (hospital) settings. This book is an invaluable reference for medical practitioners seeking to integrate opioid use disorder (OUD) treatment into general medical settings, including primary care, the inpatient hospital, and the emergency department. It recognizes opioid-related deaths in the United States as a significant public health crisis and fills the gap in drug use and addiction treatment knowledge for care providers. Timely and concise, opening chapters examine the history of OUD pharmacology and treatment, as well as the principles of care and treatment. Subsequent chapters analyze the shortcomings of current approaches to opioid addiction, including the high cost and low value of acute care delivered by minimally trained providers and the fixation on short-term detoxification and rehab. The book offers specific guidance for practical integration of effective opioid use disorder treatment into a range of healthcare settings. Chapters also discuss the unique complexities of caring for special populations with OUD, such as pregnant people and those involved in the criminal legal system. The book concludes with personal experience from individuals with a history of OUD. Socially conscious and practical, Treating Opioid Use Disorder in General Medical Settings serves as a crucial evidence-based resource for physicians, nurse practitioners, physician assistants, nurses, and other healthcare professionals. The Azure Services Platform is a cloud-computing technology from Microsoft. It is composed of four core components—Windows Azure, .NET Services, SQL Services, and Live Services—each with a unique role in the functioning of your cloud service. The transformational effects of globalisation, technological progress and demographic change on life at work and outside of it amplify the importance of getting adults' skills right. OECD research shows that individuals, employers and society benefit from adults having higher levels of skills. Slovenia has achieved significant improvements in student performance and tertiary attainment in recent decades. Yet today, many adults in Slovenia have only low levels of basic skills. Participation in adult learning remains below Slovenia's targets, especially for low-skilled, unemployed and older adults, and workers in small businesses. Against the backdrop of a growing economy and awareness about the importance of skills, Slovenia's

government, social partners and stakeholders have a unique opportunity to improve how they share responsibility and work together in the adult learning system. This report outlines how Slovenia can strengthen the enabling conditions for co-operation, co-operation between specific actors (ministries, municipalities and stakeholders), and co-operation on specific challenges (promotion and financing). It recommends eight actions that government, social partners and stakeholders can take to strengthen co-ordination and co-operation, in order to improve participation, outcomes and cost-effectiveness in adult learning.
