Canada's automotive "Dr. Phil" says there's never been a better time to buy a new car or truck. For deals on wheels, 2013 will be a "perfect storm." There's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar, a worldwide recession driving prices downward, and a more competitive Japanese auto industry that's still reeling from a series of natural disasters. In addition to lower prices and more choices, 2013 car buyers will see more generous cash rebates, low financing rates, bargain leases, and free auto maintenance programs. Buy, sell, or hold? Which cars and trucks are "wallet-friendly" and can easily last 15 years? Which vehicles offer the most features to best accommodate senior drivers? Do ethanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive Engineers? Is GM's 2013 Volt electric car destined to become an electric Edsel? These questions and more are answered in this informative guide.

Don't throw that old Garmin GPS out just because the maps are out-of-date. Learn how to update your maps 100% for free using OpenStreetMap data. This book, with a focus on English and Polish, is a study of surveying terminology, which may be considered as an under-researched area when compared to legal, medical or business terminologies. It examines differences between terms and concepts in the two languages. The purpose of the book is three-fold: firstly, to investigate how

surveying terms are created and how they are named in English and Polish; secondly, to analyse concept systems of the two languages with respect to surveying terminology; and thirdly, to indicate the areas of surveying in which terminological and conceptual differences occur, the factors that trigger them and translation strategies which are used to solve them. The book offers a systematic, corpus-based approach to terminology. Data for analyses come from the English and Polish surveying corpora compiled specifically for this project. The author of the book attempts to provide a wide picture of surveying terminology by looking at problems that diversified groups of users may identify. The book is directed towards terminologists and lexicographers, for whom it provides a set of guidelines on how to enrich the content of surveying dictionaries, translators and technical writers, who may find information on how to deal with conceptual mismatches, and to specialists in the surveying field, who are interested in finding equivalents for problematic terms.
