This book reports on cutting-edge theories and methods for analyzing complex systems, such as transportation and communication networks and discusses multi-disciplinary approaches to dependability problems encountered when dealing with complex systems in practice. The book presents the most relevant findings discussed at the 22nd International Multidisciplinary Conference on Reliability and Statistics in Transportation and Communication (RelStat), which took place on October 20 - 21, 2022, in Riga, Latvia, in hybrid mode. It spans a broad spectrum of advanced theories and methods, giving a special emphasis to the integration of artificial intelligent concepts into reliability approaches. "Description and discussion of the many aspects of Parkinson disease (PD) is dogged by the fact that PD is an ambiguous concept. What we call PD is an etiologically and clinically heterogeneous meta-syndrome overlapping a number of other disorders. Definitions, diagnostic criteria, and classification schema provide essential common vocabularies for communication among clinicians and researchers. Definitions, diagnostic criteria,

and classification schemes for PD, however, are constructs imposed on variable and imperfectly understood disease biology. Difficulties with formulation of PD definitions, diagnostic criteria, and classification schemes include historical and contemporary use of competing definitions of PD, disease heterogeneity, the existence of disorders with overlapping clinical and pathological features, and ambiguous use of the terms disease and syndrome. For the purposes of exposition and discussion in this book, an inclusive, perhaps vague, definition of PD is employed:" This two-volume set LNCS 12212 and 12213 constitutes the refereed proceedings of the Second International Conference on HCI in Mobility, Transport, and Automotive Systems, MobiTAS 2020, held as part of the 22nd International Conference on Human-Computer Interaction, HCII 2020, in Copenhagen, Denmark, in July, 2020.\* A total of 1439 full papers and 238 posters have been carefully reviewed and accepted for publication in HCII 2020. The papers cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. MobiTAS 2020 includes a total of 59 papers and they are organized in the following topical sections: Part I, Automated Driving and In-Vehicle Experience Design: UX topics in automated driving, and designing in-vehicle experiences. Part II, Driving Behavior, Urban and Smart Mobility: studies on driving behavior, and urban and smart mobility. \*The conference was held virtually due to the COVID-19 pandemic. Se trata de un trabajo sobre las características y alternativas de formación actuales en relación a las personas con deficiencia mental. Es una síntesis de los estudios más recientes en torno a la problemática educativa de la deficiencia mental desde todos los ámbitos, con la finalidad de acercar al lector de una forma estructurada, las distintas perspectivas en el conocimiento y en la intervención de las personas con deficiencia mental. Se mueve en una línea educativa para analizar la situación global del deficiente mental, desde ámbitos

de actuación, de una forma real y concreta. El segundo gran bloque de temas se sitúa en una interesante perspectiva social y de integración familiar, escolar y laboral. Finaliza tratando de manera original los ámbitos de la calidad de vida del deficiente mental adulto. Addresses the current state of religion in the U.S. and examines the many ways it has changed and been transformed, as well as how those changes impact us personally and as a society Sleep disorders and disruptions are commonly associated with negative mood, hostility, poor concentration, and ego depletion. And while researchers have long investigated the widespread negative effects of shift work on individuals, the knowledge derived from these studies is rather limited to those with non-linear work schedules. However, whether employees are clocking in a normal 9-5 or trudging through the graveyard shift, sleep is a crucial activity for us all. If the quantity and quality of our sleeping patterns are disrupted, the consequences affect not only the employee but for the organization they work for, as well. Work and Sleep: Research Insights for the Workplace addresses the effects of sleep on employee and organizational functioning, and the impact of common work experiences on a night's rest. With a team of influential organizational psychologists at the helm, the editors lead a group of expert contributors as they each explore the issues that, regardless of industry, matter in work force well-being today.
